

Accessories and Fittings

To create the perfect growing environment you need the right combination of accessories and fittings.

Explore your options.

Often, it takes a full growing season of using your Alitex greenhouse to really appreciate what you would like to add. Our TLC team are dab hands at retro-fitting our accessories and they can also create bespoke options. If you cannot find what you are looking for, just give them a call.

If you don't yet own an Alitex greenhouse but would like to get growing, a number of our accessories are available. If an accessory can only be fitted within an Alitex, we've made this clear using our little greenhouse key.

EDWARDS GREENHOUSE HEATER

This robust electric heater offers excellent thermal efficiency with a high capacity circulating fan. The unit provides either 1.0 kW, 1.8 kW or 2.8 kW of thermostatically controlled heat output.

ORNAMENTAL FLOOR GRIDS

Originally used by the Victorians as floor grills for heating pipes, they are still an essential method of housing your hot water heating system, but can also be used simply as a decorative floor finish.

*This item will need fitting at time of greenhouse installation.

THE FELL EXTERNAL GREENHOUSE SHADE

Our shades are recommended to optimise heat and light level control. Fitted externally between the glasshouse ridge and gutter, the shade reduces light intensity and therefore plant scorch, and helps to keep temperatures down.

Edwards greenhouse heater

Cast iron floor grids

Fell external shades

Automatic electric roof vent

AUTOMATIC ROOF VENT

Automatic greenhouse ventilation, with more precise control, is required for specialist growing and large greenhouses. This can be achieved by the inclusion of deeper vents and thermostatically controlled, electrically operated motors.

*This item will need fitting at time of greenhouse installation.

FITTED HEATING SYSTEMS

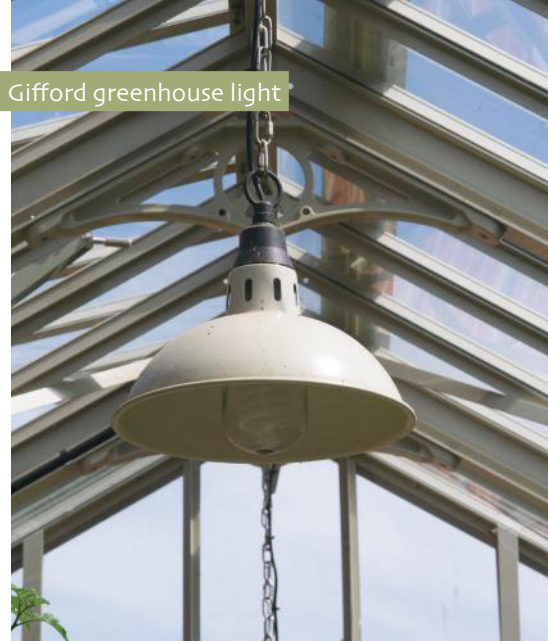

There are times in larger greenhouses when you need a comprehensive 'wet' boiler run heating system. Please contact us to discuss your options. *This item will need fitting at time of greenhouse installation.

TRADITIONAL BENCHING

Designed to maintain the traditional feel of the greenhouse, this solid, waist-height bench combines strength and flexibility with an elegant look. The framework is manufactured using heavy cast aluminium legs and extruded aluminium sides, which is powder coated in black as standard or a colour of your choice. The deep sides allow the bench to be filled with Hydroleca.

HYDROLECA

These expanded clay pellets were originally used to insulate stove flues as they would fill odd shaped spaces. They also retain moisture very well, which helps to create humidity around your plants on benching.

Gifford greenhouse light

GIFFORD GREENHOUSE LIGHT

Designed in a traditional style with a polyester powder coated reflector, the Gifford Light is an essential feature of a working greenhouse during the evenings and darker winter months.

Traditional benching

MALLERY DISPLAY BENCH

This display bench comprises two or three well spaced, strong shelves supported on long, elegant legs - creating stunning plant displays. It also enables areas with lower light levels at the back of a greenhouse to be fully utilised.

Mallery tiered display bench

STRAWBERRY BOARD

The closer the plant and foliage to the glass, the more impact is to be gained from the sun's rays – particularly in times of lower light levels. Mounted on the eaves, along the gable or high on the rear wall, strawberry boards add valuable extra space in the busy growing season.

Strawberry Board - high shelf

PROPAGATION/MISTING BENCH

This is a dedicated area of the bench designed for the germination and protection of small seedlings. Incorporating a temperature controlled heated foil mat, combined with misting risers, it creates a humid and warm environment. The bench is designed with deep sides to allow for a generous sand bed for your seeds and cuttings.

Misting bench

INTERNAL RESERVOIR

Internal reservoirs that collect rainwater keep the water warmer, reducing the risk of thermal shock providing soft, chemical free water. Of robust construction, the 80 gallon / 360 litre capacity reservoir can be discreetly sunk into the ground beneath the bench fitted with an easy to use hand pump. *This item will need fitting at time of greenhouse installation.

Internal reservoir

SUPPORTS AND VINE WIRES

Bespoke fruit supports and vine wires offer structure and support to peaches, vines, melons, tomatoes and cucumbers to name a few. We will work out your growing needs and the areas where you want to train fruit, and combine rigid supports with tensioned wires to train plants up to the roof space and, in a lean-to greenhouse, up and across the rear wall.

Vine wires and fruit supports

HEATHLANDS COLD FRAMES

Cold frames enhance the effectiveness of your greenhouse by providing an additional cold-protected environment, creating the ideal conditions for hardening-off foliage. With metal props on rollers either side of the frame, you benefit from extra height and more space making it easier to access your crops; an added safety catch also helps to avoid anything getting trapped. The cold frames are a maximum width of 0.9m but can be built to any length and are powder coated to a colour of your choice.

Cold frames

COLD FRAME VENT SLIDES

Vent slides allow warmer air from the greenhouse to transfer into the cold frames. This warmer environment can be taken advantage of by starting early salad crops directly in the 'hot' frame. The sliding vents are simply operated by sliding them open or closed as required.

*This item will need fitting at time of greenhouse installation.

Vent slides

PROFESSIONAL PROPAGATOR

Our professional propagator is designed to provide the warm, moist, closed environment required by germinating seedlings and newly planted cuttings. The carefully designed frame is made of strong aluminium sections. The heart of the unit is a thermostatically controlled foil element, operating within the range of 0°C to 40°C and the ventilated ends allow free movement of air throughout the frame, encouraging healthy growth.

Propagator

HEWITT POTTING SHOE

A favourite of the professional gardener, this stoutly constructed potting shoe sits perfectly on our traditional bench. It is designed to enable the fast and efficient filling of pots, allowing the compost to be kept in a manageable area.

Hewitt potting shoe

Price list

January 2018

Edwards heater	£324 each
Floor grids:	
0.3m x 1.2m	£324 per run
0.6m x 0.9m	£462 per run
Fell external shade	£894 per 5 metre length
Automatic electrical roof vent	starting from £2,640
Gifford light (excludes electrician fees)	£138 each
Traditional bench	£372 per metre run
Mallery Tiered display bench	
2 tiers	£786 per metre run
3 tiers	£1,050 per metre run
Strawberry board- gable, eaves	
or wall mounted	£222 per metre run
Continuous hanging shelves	
for bespoke greenhouses	£318 per metre run
Misting bench	POA
Internal reservoir	£582 each
Cold frame	starting from £564 per metre run
Vent slide	£72 each
Professional propagator	£492 each
Hewitt potting shoe	£126 each
Fruit Supports	POA
Vine wire supports	POA

Please note:

The above prices are inclusive of VAT at the prevailing rate. However they are exclusive of delivery and installation if ordered as stand alone item(s) and are not part of a greenhouse order. Please contact a member of the TLC team to discuss delivery and installation fees. We reserve the right to change our prices at any time.
